

3. Pharmaceutical waste

Product name: A film about pharmaceutical waste

Developed by:

1. Marieta Mikulewicz

3. Agata Geben

2. Beata Borisowa

4. Karolina Giedryte

Form 3

Long-term Project

Theme: Nature and Environment

StarT project jobs tended to take a long time in general, but it was quite challenging and interesting to try out our social and computer skills while working on the film and animations. At first, we had to organize our thoughts, formulate what might work for the project, and then transform everything into a discussion. Secondly, we had to take interviews and start making Internet researches. It was a very time-consuming work, but we did almost everything on time.

Our main aim was to teach people how to deal with expired medications and drugs through a movie. The hardest part of making the project was to decide which pharmaceutical problem related to nature and environment to deal with.

Because of lack of a necessary program, the most challenging task was to make a film and add some animations. StarT project, which was based on learning, had given us lots of positive aspects and stimulated to take part in mental work.

It was an unforgettable experience that had a great impact on our life and team work
